

Dear Mr Phill,

I am writing to you because I think we should make more effort to make our school sustainable and help save money at the same time for school. We want to make improvements in school to show we are being eco-friendly and reducing waste.

We have noticed a huge area of waste in school is in the dinner hall with food waste. To stop this waste problem, we want to start composting. We need you to empty the compost bins which are next to the chicken run and help us to get them set up to use properly.

Then we can compost:

- Fruit cores and peelings
- Vegetables leftovers and peelings
- Egg shells
- Coffee grounds
- Tea leaves
- Grass cuttings
- Hoover dust

The compost made in the bins will help reduce the waste we are throwing away, but we can also use it to fertilise our gardens and planters around the school grounds. This will help support the 11 before 11 aim to grow our own food!

I hope you consider it carefully and support us to get our ideas started. This is an incredibly important step to make our school more sustainable.

Yours sincerely,

Bailey and the rest of the eco committee.
